ABOUT

I am a Staff Architect at VMware creating value at the intersection of applications and infrastructure. Over the years, I've had the privilege of working in high-performing teams within start-ups to large enterprises. Within these teams, I've worn many hats including team lead, software engineer, architect, and developer advocate. I thrive in teams with an affinity for getting things done, pragmatism, and open source. Since 2017, I've been working in the cloud native ecosystem with a focus on building, running, and managing large-scale Kubernetes clusters in production.

TECHNICAL SKILLS

The following are languages, tools, and systems I've used to get things done for real-world, production, scenarios.

EXPERIENCE

Staff Architect

11/2018 - Current

VMware

I am a Staff Architect at VMware creating value at the intersection of applications and infrastructure. Over the years, I've had the privilege of working in high-performing teams within start-ups to large enterprises. Within these teams, I've worn many hats including team lead, software engineer, architect, and developer advocate. I thrive in teams with an affinity for getting things done, pragmatism, and open source. Since 2017, I've been working in the cloud native ecosystem with a focus on building, running, and managing large-scale Kubernetes clusters in production.

Staff Field Engineer

03/2018 - 11/2018

Heptio

I am a Staff Architect at VMware creating value at the intersection of applications and infrastructure. Over the years, I've had the privilege of working in high-performing teams within start-ups to large enterprises. Within these teams, I've worn many hats including team lead, software engineer, architect, and developer advocate. I thrive in teams with an affinity for getting things done, pragmatism, and open source. Since 2017, I've been working in the cloud native ecosystem with a focus on building, running, and managing large-scale Kubernetes clusters in production.

Senior Software Engineer

10/2016 - 03/2018

CoreOS & RedHat

I am a Staff Architect at VMware creating value at the intersection of applications and infrastructure. Over the years, I've had the privilege of working in high-performing teams within start-ups to large enterprises. Within these teams, I've worn many hats including team lead, software engineer, architect, and developer advocate. I thrive in teams with an affinity for getting things done, pragmatism, and open source. Since 2017, I've been working in the cloud native ecosystem with a focus on building, running, and managing large-scale Kubernetes clusters in production.

Senior Consultant

12/2013 - 10/2016

MuleSoft

I am a Staff Architect at VMware creating value at the intersection of applications and infrastructure. Over the years, I've had the privilege of working in high-performing teams within start-ups to large enterprises. Within these teams, I've worn many hats including team lead, software engineer, architect, and developer advocate. I thrive in teams with an affinity for getting things done, pragmatism, and open source. Since 2017, I've been working in the cloud native ecosystem with a focus on building, running, and managing large-scale Kubernetes clusters in production.

Technical Trainer

07/2012 - 12/2013

Hyland Software

I am a Staff Architect at VMware creating value at the intersection of applications and infrastructure. Over the years, I've had the privilege of working in high-performing teams within start-ups to large enterprises. Within these teams, I've worn many hats including team lead, software engineer, architect, and developer advocate. I thrive in teams with an affinity for getting things done, pragmatism, and open source. Since 2017, I've been working in the cloud native ecosystem with a focus on building, running, and managing large-scale Kubernetes clusters in production.

PROJECTS, COMMUNITY, AND TALKS

I am a Staff Architect at VMware creating value at the intersection of applications and infrastructure.
